

Halton Marine Oil & Gas Segment References

Halton Marine, one of the world's leading suppliers of marine HVAC, develops, manufacturers and markets reliable, high-quality ventilation solutions specifically designed for the marine, oil & gas and navy applications. Halton Marine's main product groups are HVAC dampers, galley and cabin ventilation, droplet separators, airflow distribution and management products.

Safety is the most important factor in extreme conditions where a fire could put people's life at risk unless necessary precautions are taken. Therefore it is essential that the equipment chosen is top-class. Halton supplies robust, high-quality fire and gas dampers that are recognized by the leading oil-companies and major classification societies world-wide.

The technical quality and proper functioning of Halton's solutions, built in state-of-the-art production facilities, are tested in Halton's own laboratories and in independent research laboratories around the world. Typical test include: leakage tests, fire tests, shock tests and FAT for each project. Halton's R&D centers offer indoor climate testing to test and verify the performance of each solution.

Scope of supply

- A wide range of high-quality dampers for Oil & Gas market
- Galley ventilation equipment including UV-light technology and demand based ventilation
- Cabin ventilation systems including energy-efficiency
- Droplet separators. Airflow management and distribution products
